

# Go Quick Reference

version 2.1

## Intro

```
package main
import (
    "fmt"
)
func main() {
    a := 1 + 2
    b := false
    "foo goto bar"
    5-3
    "5-3"
    5*3
}
```

## More

```
func foo(bar int, baz int) int {
    return bar + baz
}
```

## More2

```
func foo(bar int, baz int) int {
    return bar + baz
}
```

```
package anothermain
import (
    "fmt"
)
func main() {
    fmt.Println("Gopher, save me")
}
```

```
package anothermain
import (
    "fmt"
)
func main() {
    fmt.Println("Gopher, save me")
}
```

```
package anothermain
import (
    "fmt"
)
func main() {
    fmt.Println("Gopher, save me")
}
```

```
package anothermain
import (
    "fmt"
)
func main() {
    fmt.Println("Gopher, save me")
}
```
